Description

Regularly, large social networks are hacked and the most commonly used passwords are published. The participants should search for these publications using various search terms, practising which ones are useful and which ones less so.

If participants are involved who have skills in different languages, they can search for the publications in their own languages. In this way, they can find out whether cultural differences affect the creation of passwords.

Afterwards, the participants create a poster warning about the use of such weak passwords. The poster should generate
